Definitions:

- Forestland—Land with at least 10 percent cover (or equivalent stocking) by live trees of any size, including land that formerly had such tree cover and that will be naturally or artificially regenerated.
- Number of all live trees (or trees)—Number of live trees at least 1 inch diameter at breast height or diameter at root collar.
- Volume of all live (or volume)—Net volume of wood in the central stem of live trees 5.0 inches diameter or larger from a 1-foot height stump to a minimum 4-inch top diameter outside bark, or to where the central stem breaks into limbs all of which are less than 4.0 inches diameter outside bark. Specifications differ for woodland species.
- All live aboveground biomass (or biomass)—Aboveground dry weight of live trees 1.0 inches diameter or larger, including all tops and limbs, and stump, but excluding foliage.
- Per acre estimates in the appendix are per acre of forestland.

Notes:

- Estimates are given by county in the figures and tables. Estimates are based on a sample and are therefore subject to sampling error. Sampling errors may be high for individual counties.
- Inventory estimates are from FIADB loaded to the FIA DataMart (<http://apps.fs.fed.us/fiadb-downloads/datamart.html>) on 19 December 2016.

^A Land with at least 10 percent cover by live trees of any size, including land that formerly had such tree cover and that will be naturally or artificially regenerated.

^B Number of live trees with a minimum diameter of 1 inch.

^C Net volume from a 1-foot high stump to a minimum 4-inch top diameter outside bark in trees with a minimum diameter of 5 inches.

^D Aboveground oven-dry weight of live trees with a minimum diameter of 1 inch.

Estimates in the table are based on a sample and are therefore subject to sampling error. Sampling errors may be high for some counties.

^A Land with at least 10 percent cover by live trees of any size, including land that formerly had such tree cover and that will be naturally or artificially regenerated.

^B Number of live trees with a minimum diameter of 1 inch.

^C Net volume from a 1-foot high stump to a minimum 4-inch top diameter outside bark in trees with a minimum diameter of 5 inches.

^D Aboveground oven-dry weight of live trees with a minimum diameter of 1 inch.

Estimates in the table are based on a sample and are therefore subject to sampling error. Sampling errors may be high for some counties.
